

FMS

FIELD MANAGEMENT SERVICES

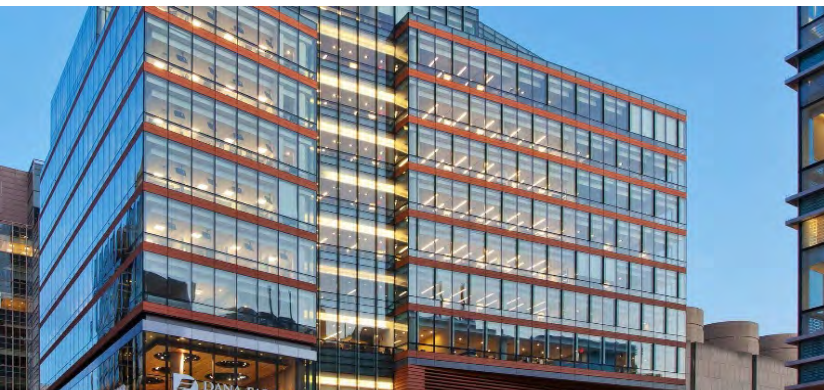

Healthcare EMF Consulting Services

Providing the best patient care and experience is critical to any healthcare facility. Ensuring that imaging and other diagnostic equipment is operational and not impeded by environmental forces such as electromagnetic interference (EMI) and radio frequency interference (RFI), is critical to that mission.

FMS provides a wide breath of professional consulting services for new and existing healthcare facilities. From site selection through facility commissioning, FMS can assist your design or facilities team to ensure that sensitive diagnostic equipment, patient imaging and support systems will operate free of interference from both internal and external EMF/RF threat sources. FMS' team of experts diagnose EMI and RFI issues through surveys, source testing, systems modeling, and then provide EMF / RF mitigation design and construction services.

FMS understands the importance of patient comfort and patient throughput to today's leading Healthcare facilities. FMS' holistic design approach ensures a facility's immediate programming requirements are met while providing design recommendations to help limit the potential impact of EMI and RFI on future programming requirements. Our services reduce upfront and future facility costs, operational downtime and impacts to facility and patient programs.

Services

FMS' Consulting Services assist in the development and continuous operation of the world's premier healthcare facilities. With our team's support, these facilities are providing superior patient care while maximizing patient throughput and the development of new procedures and technologies to drive the healthcare industry into the future.

Services:

- AC/ELF EMI Assessments (Pre and Post Construction)
- Geomagnetic / DC EMI Assessments
- RFI Assessment (Pre and Post Construction)
- Electromagnetic Field Management Solutions
- Power Infrastructure EMI Optimization
- Design and Placement of RF Infrastructure for minimum RFI
- AC/ELF Shielding Design & Installation
- MRI Shielding Design
- RF Shielding Design & Installation
- EMF and RF Modeling
- Gauss Containment Modeling

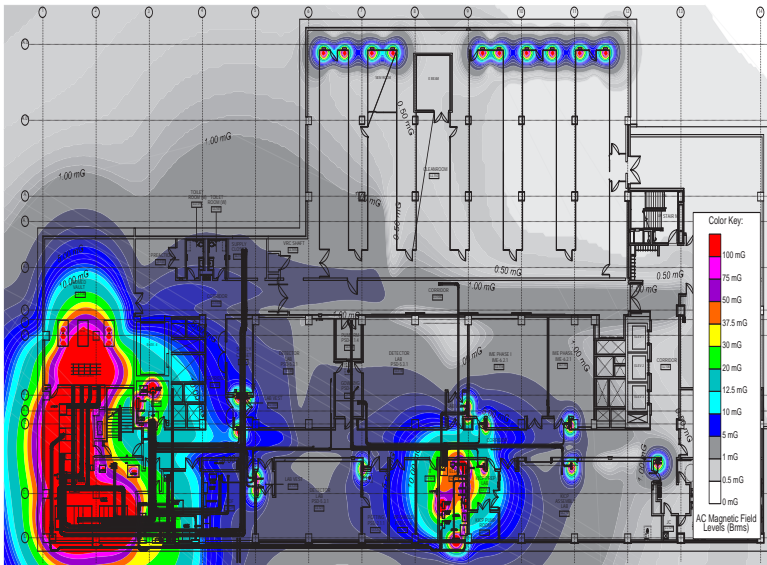

The FMS Advantage

Field Management Services (FMS), founded in 1995, is a professional engineering company dedicated to all aspects of EMF/RF/EMP consulting and services. FMS is headquartered in Los Angeles, with regional offices in New York, Washington DC Metro area, Dublin, Ireland, and operations through technology partners in Taiwan, UK, Israel, Japan, and Singapore.

The FMS Advantage is our clients' advantage. FMS principals have decades of experience with providing mitigation through creative and restrained use of leading edge technologies. FMS holds US patents for shielding magnetic fields, and has pioneered innovation in EMI processes and materials.

Our consultative and collaborative approach with design and facility teams produces the best performing facilities, presented in a context which reflects our clients' decisions resulting in projects that are delivered on time and on budget.
